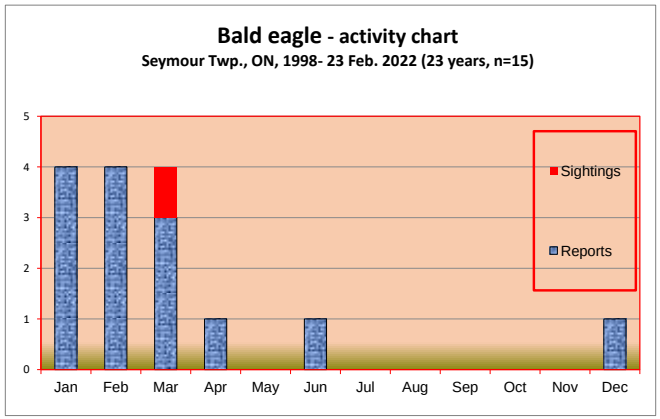
Updated to 23 February 2022



Note: the chart displays the number of days in a given month in which eagles were seen. On any given day, one bird or as many as three (an adult and two juveniles, say) might be seen. Accounts of various observers in the past 20 years suggest that there may be as many as 3 nests in the length of the Trent between Hastings and Frankford: just below Hastings (Percy Twp.), just above the mouth of the Crowe, and (down near the southeast corner of our area) toward the east end of the Percy Reach.
