Likely cuckoo bird strikes at home - none

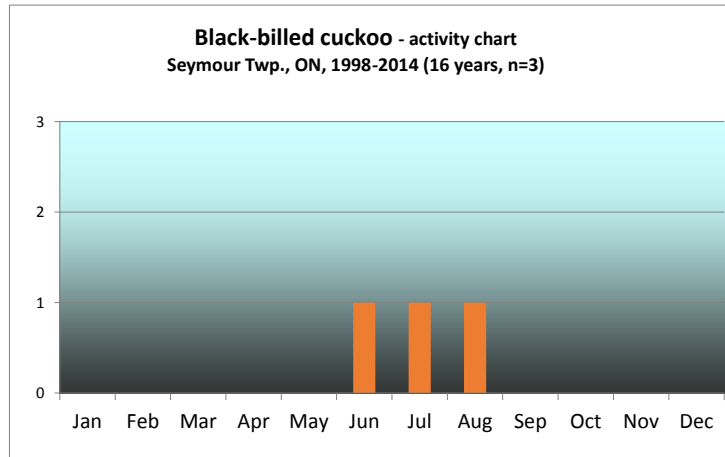

Updated to 24 August 2014

Note: the chart displays the number of days in a given month in which the species was seen. This says nothing of total bird numbers: though commonly with this species one sees an individual on any given occasion. Said to be easier to spot by ear than eye, especially in the spring-summer nesting season.

The cuckoo is easy to miss, a skulker in woods and thickets. This juvenile was relatively bold, seen near a trail in August 2014.
